

PostDoc Position in Environmental Microbiology and Soil Microbial Ecology

MINAGRIS - Micro- and Nano-Plastics in AGRICultural Soils: sources, environmental fate and impacts on ecosystem services and overall sustainability

Postdoc position in environmental microbiology and soil microbial ecology

University of Thessaly is offering a Postdoc position in environmental microbiology and soil microbial ecology with expected commencement February 2022 or as soon as possible thereafter. The position is offered in the frame of the project MINAGRIS, an H2020 project funded under the call SFS-21-2020 – B EMERGING CHALLENGES FOR SOIL MANAGEMENT. It is a 5-year project starting at 1.9.2021 and involves 20 partners from 13 EU countries.

Brief Project Description

Plastic use in agriculture has tremendously increased in the past decades resulting in soil pollution with plastic residues forming besides macroplastics, micro- (MP) and nano-plastics (NP). MINAGRIS aims to contribute to healthy soils in Europe by providing a deeper understanding and tools to assess the impact of MP and NP in agricultural soil health. To create an overview on the actual situation across Europe, MINAGRIS will assess the use of different plastic polymers in agricultural systems in 11 case study across Europe and identify the resulting types and concentrations of MPs and NPs. Concentrations of other stressors in soils such as pesticides and veterinary drugs will be additionally assessed. MINAGRIS will provide validated analytical tools that allow the quantification and identification of MPs and NPs in soils. Based on the results of the case study sites, controlled experiments will be conducted to analyse the impact of MPs and NPs on physico-chemical soil properties, soil biodiversity, plant productivity, and Ecosystem Services, as well as their potential transfer to other parts of the environment and plants. Furthermore, synergistic effects with other stressors are assessed. Quantification of the impacts of MNP on soil biodiversity and agricultural productivity, their transport and degradation in the environment, their impacts on socio-economic components, and synergies between all of them will make it possible to identify, in a multifactorial vision, the benefits and risks associated with the use of plastics in agriculture. Based on the results, MINAGRIS will quantify the economic, environmental, and social consequences of unsustainable soil management at the field and farm level in different biogeographical regions and, through a Multi-Actor Approach (MAA), develop a practical toolbox for and with farmers for the rapid assessment of soil exposure, at the same time raising relevant stakeholders' and end-users' awareness of the issue.

Principal supervisor: Prof. Dimitrios Karpouzas, dkarpouzas@uth.gr, +30-2410565294

Collaborating Partners: (i) Dr Violette Geissen and Dr Stefan Geisen Wageningen University, The Netherlands

Job description

The position is available for 36 months with a possible extension of 12 months.

The main working tasks of the successful candidate will be:

- To set up soil microcosms and pot studies to examine the effect of micro- and nano-plastics of different chemistry on the soil microbial community with the focus on N cycling microorganisms and arbuscular mycorrhizal fungi, while effect on the overall soil microbial diversity and functioning will be also determined,
- To analyse the data using appropriate bioinformatic and ecological statistical tools,
- To determine the composition of the soil microbiota colonizing soil plastisphere, identify their ecological role and interactions with other organic pollutants using advanced omic tools
- To write scientific papers and present the research in scientific conferences,
- To work closely with the PI and the PhD students working on MINAGRIS and train them on experimental and methodological approaches needed,

Key criteria for the assessment of candidates

PostDoc Position in Environmental Microbiology and Soil Microbial Ecology

- PhD in Microbial Ecology or Environmental Microbiology
- Good writing skills as demonstrated by relevant research publications
- Experience in molecular tools used in microbial ecology (e.g. q-PCR, amplicon sequencing)
- Experience in bioinformatics and ecological statistics
- Previous experiences with plastics handling and/or soil related-experimentation will be a merit
- Previous experience in shotgun omic analysis will be a merit

Terms of employment

Recruitment and Terms of appointment will be done according to the national rules and regulations. The stipend of the fellow will be 2400 € including social and health security coverage (1350 € net/monthly). Alternatively, the researcher could be paid through a fixed term fellowship (1600 € net/monthly).

Place of Employment

University of Thessaly, Department of Biochemistry and Biotechnology, Laboratory of Plant and Environmental Biotechnology, Larissa, GREECE, Website: <https://plantenvlab.bio.uth.gr>

Application Procedure

The application, must be submitted by mail to dkarpouzas@uth.gr and later through the submission system of the University of Thessaly when the call will be officially open https://ee.uth.gr/el/jobs_index2

Please include

- Full CV including studies, research experience, work experience and publications
- 3 professional referees (Name, address, telephone & email)

The University of Thessaly wish our staff to reflect the diversity of society and thus welcomes applications from all qualified candidates regardless of age, gender, race, religion or ethnic background.

The deadline for applications is 7.12.2021. Applications received later than this date will not be considered.

Recruitment Process: After the expiry of the deadline for applications, the project manager will provide all applications to the members of the recruitment committee which will evaluate all applications and select the best three candidates based on the quality of the candidates' previous training, qualifications and skills (as listed above), CV. The best three candidates will be interviewed by the recruitment committee which will select the best applicant for the position. The applicants will be notified of the final selection by the Project Manager and will be given 7 days to accept or decline.

Questions

For specific information about the position, please contact Prof. Dimitrios Karpouzas (dkarpouzas@uth.gr Tel. +3024105652904)
