

Curriculum Vitae

First name: Sotirios

Surname: Vasileiadis

Date and Place of Birth: 18/04/1977, Veroia, Greece

Marital status: Single

Telephone #: +30 2410 565 223;

+30 6976 833 777 (preferred);

Email accounts: vasiliad@gmail.com (preferred);

sovasileiadis@uth.gr

Studies - Degrees:

- PhD in the Department of Agricultural and Environmental Chemistry of Università Cattolica del Sacro Cuore (Piacenza, Italy), specializing in targeted metagenomics and bioinformatics; degree conferred in 2012. Thesis title: “*Reflections of ecosystem services on the agricultural soil prokaryotic phylogenetic and functional diversity: PCR based approaches in prokaryotic ecology*”.
- MSc in Organic Farming, specialization in plant pathology and molecular plant-microbe interactions and biocontrol at Wageningen University (The Netherlands); degree conferred in 2008.
- Diploma in Agricultural Sciences with specialization in plant production at the Aristotle University of Thessaloniki (Greece; 5-year degree / MSc-equivalent); degree conferred in 2003.

Relevant employment history:

- Since May 20th 2021: Assistant Professor at the Group of Plant and Environmental Biotechnology of the Department of Biochemistry and Biotechnology of the University of Thessaly (at Viopolis, in Larissa, Greece) at the field of Microbial Molecular-Ecology / Genomics.
- From October the 1st 2019 until the 5th February 2021: lecturer fellow at UTh (Greece) for the courses of General Biology (BA0101), Antidoping in sports (BK2201), and Specific Topics in Microbial Ecology (BX0902).
- From July the 1st 2019 until July the 30th 2020: research fellow at AUTH (Greece) at the project entitled “Novel technologies at anaerobic digestion aiming at methane production increase” (# 95663, action Research-Create-Innovate, EU Partnership Agreement 2014-2020. Topic: Characterization of the microbial population using massively parallel sequencing of the 16S rRNA gene aiming at the monitoring of population shifts in continuous stirred-tank reactors (CSTR).
- Marie Skłodowska Curie Actions Individual Fellowship fellow from July 1st of 2017 until June the 30th 2019. Project title “EMIGRATE: Exploring Microbial networking in pesticides biodegradation; novel inocula and biocatalysts for biodepuration of agro-industrial Effluents”. Meta-genomics/transcriptomics/bolomics/proteomics methods and high throughput techniques heavily relying in large-dataset bio/chemo-informatics were implemented by the fellow for achieving the project aims. The project website can be found at: <http://emigrate.bio.uth.gr>
- Research Associate, FII (former CERAR) UniSA, from March 2014 to March 2017. Research Topic: *Microbial ecology of metal stressed environments (soil, water, wastewater, biosolids) and horizontal gene transfer events in wastewater* (supervised by E Donner and E Lombi). Tasks: experimental plan and protocol setup for screening microbial diversity and functions using high throughput sequencing (HTS) of phylogenetic marker genes combined with shotgun meta- genomics/transcriptomics and associated bio-informatics/statistics; student supervision and training; Assigned as Coordinator of the FII Microbiology Lab since May 1st 2015.
- Postdoctoral Researcher, Università Cattolica del Sacro Cuore, Feb 2012 – Feb 2014. Research topic: *Effects of synthetic and natural pesticides on the soil microbial communities* (SNAC project, supervised by M Trevisan). Tasks: protocol setup/performance for microbial diversity screening with HTS of phylogenetic marker genes and associated bio-informatics/statistics; genomics; student supervision and training.
- Research Assistant, Università Cattolica del Sacro Cuore, Dec 2011. Research topic: SNAC project (see above). Tasks: protocol setup/performance, microbial diversity screening with HTS of

phylogenetic marker genes and associated bio-informatics/statistics.

- Research Assistant, NIOO-KNAW (Netherlands Institute of Ecology; currently in Wageningen, the Netherlands, supervised by JH Leveau and J Raaijmakers), Aug – Nov 2007. Research topic: *High throughput screening of large insert metagenomic libraries using fluorescent in situ hybridization (FISH) and flow cytometry*. Tasks: handling of the metagenomic library (fosmids/*E. coli* hosts); FISH protocol development; epi-fluorescent microscopy; flow cytometry.

Industrial innovation:

- Contract and industry-academia collaboration with Advanced Analytical Technologies (AAT, Piacenza, Italy; www.aat-taa.eu); bioinformatics/statistics tasks; projects managed by Dr S Soldi.
- An industry-academia collaboration (UniSA-ECAS4) for the setup and application of molecular biology protocols in testing the antimicrobial efficacy of anolytes.

Grants/Awards:

Project Grants Received/Partnered

- Start pending with 4-year duration: **Team member (PhD student supervisor)** of DN (HORIZON-MSCA-2022-DN-01-01). Pharm-ERA: Improving monitoring and environmental risk assessment of pharmaceuticals, antimicrobial resistance and pathogens from terrestrial to aquatic environments. Project grant agreement pending with 2,657,779€ requested budget (UTh participation with 240,000€)
- Mar 2023 – Aug 2024: **Coordinator** of project STRESS: reUSe of TReated urban wastewater in agriculture: microbial load and rESistance to antibioticS (MIS #5162177). STRESS aims at identifying issues caused by water recycling and organic fertilization inputs through an in-depth study of the effects of such inputs on the receiving microbial communities. 307,000€.
- Nov 2022 – Oct 2025: **Team member** of WIDENING (HORIZON-WIDERA-2021-ACCESS-03-01 project) ACTIONr: Research ACTION network for reducing reactive nitrogen losses from agricultural ecosystems. Project grant agreement# 101079299. 1,480,300€ (UTh participation with 661,000€)
- Nov 2022 – Oct 2026: **Team member** of REA (HORIZON-CL6-2022-FARM2FORK-01-01project) RATION: Risk AssessmenT InnOvatioN for low-risk pesticides. Project grant agreement# 101084163. 6,994,748€ (UTh participation with 697,375€)
- Jan 2021 – Jun 2023: **Coordinator** of the project INVERT: INteractions of Veterinary antibiotics with soil microorganisms: exploiting microbial degradation to avert Environmental contamination and ResisTance dispersal. HFRI 01183, UTh Research Committee project number 6634. The main objective of the project is shed light in the complex interactions of VA with soil microorganisms, INVERT (project acronym) the outcome of the environmental pressure imposed by VA on the soil microbial community from negative (selection for resistance) to beneficial (selection for energy-gain biodegradation of VA) and exploit growth-linked biodegradation to reduce environmental exposure to VA. 170,000€.
- 2021-2022: **Partner** in “Effets de la turbulence sur la prolifération et la toxicité des diatomées” (TURBU-DIATOX), funded by CNRS - L’Institut national des sciences de l’Univers (INSU). Prof. U. Christaki and K. Kormas (UTh). The aim of the project is to study the transcriptional profile of diatoms under aquatic turbulence. 20,000€.
- **External collaborator** (contracted from 25 August to 5 October 2019 through the UniSA, and consultant until today) at the Australian Medical Research Future Fund (MRFF) Frontiers project entitled OUTBREAK. The project scope is to tackle antibiotic resistance at an One Health approach (<https://outbreakproject.com.au>;<https://www.linkedin.com/company/outbreak-project/>). OUTBREAK is let by the University of Technology of Sydney and is a competence buildup initiative funded with 1 million Australian dollars divided among 14 organizations for the development of an antimicrobial resistance “knowledge engine” capable of predicting outbreaks and informing interventions. As part of the purpose of OUTBREAK, the project developed tools will be implemented in a followup 5-year monitoring and implementation project if funded. My tasks are mainly related to setting up the bioinformatics analysis of animal, natural and built environmental metagenomes for the identification and relative quantification of antibiotic resistance genes and phylogenetic markers among other data analysis tasks.
- Project **coordinator** of Marie Skłodowska Curie H2020 Individual Fellowship [IF] for the period

July 2017 – June 2019. Title: “EMIGRATE: Exploring Microbial networking in pesticides biodegradation; novel inocula and biocatalysts for biodepuration of agro-industrial Effluents”. Project number 749463 with maximum estimated funding of €152,653.20.

- **Research Associate (RA)** in the South Australian PRIF International Research Grant Program IRPG 45 with partners from Nereus COST-action, the IWRC (University of Cyprus, Cyprus) and the Volcani Center (Agricultural Research Organisation, Israel), 2015-2020, (Donner, Lombi, Vasileidis, Thierry, Fatta-Kassinos, Cytryn). Total funding \$992,000 (SA PRIF: A\$400,000; UniSA: A\$180,000; Nereus A\$292,000; Volcani \$120,000). “Transfer and control of antibiotic resistance bacteria and their genes during wastewater treatment and reuse”.
- **RA** in South Australian PRIF Industry Linkage Research Grant with ECAS4 Industry Partner, 2014-2015, (Elmas, Donner, Nann, Lombi, Vasileidis). Total funding A\$232,800 (ECAS4: A\$140,000; SA PRIF: A\$92,800). “Sanitisation and disinfection using electrochemically generated disinfectants”.
- Australian Synchrotron Access Grant **beneficiary**; 48 h beamtime on the X-ray Absorption Spectroscopy beamline, April 2015. “Role of soil properties in controlling silver selective pressure and its effects on soil bacterial communities.” (AS151/XAS/9123; Donner, Lombi, Vasileidis, Brunetti). As the commercial rate for synchrotron beamtime is currently \$15K/day, this is the equivalent of \$30K in facility access funding.

Networking grant

ECRNA – ERC Networking Award. Visiting researcher in the Dept of Biotech. and Biochem. of the UTh (Thessaly, Greece) June/July 2015 (Australian- A - \$5,550).

Awards-Scholarships

Italian Society of Agricultural Chemistry PhD thesis distinction award (500 €) /// PhD scholarship (~45,000 € total / 3 years) /// MSc scholarship (~21,000 € total / 2 years)

Student supervision and support and teaching activities at workshops/summerschools:

- Actively engaged in research student co-supervision and training since the latter stages of PhD. Co-supervision of PhD students, MSc students and several visiting students. Also refereed a PhD thesis.
- Teaching support activities, training of students and visiting researchers in molecular biology laboratory methods; teaching bioinformatics and associated statistical methods; assisting with the reporting of related research results; conducting student evaluation.
- Invited speaker at the Mikrobiokosmos 2018 Summer-School (session entitled “Prokaryotic genome assembly and annotation”, 24-28 June, Moni Paou, Argalasti, Volos) and the NEREUS COST-action ES1403 Training School (session “Next generation sequencing approaches for ARB & ARGs screening in wastewater, soil and plant environments”, 29-31 May, Nicosia, Cyprus).
- Teaching the courses of “Introduction to Biology” (theory and laboratory, BA0101; 1st semester undergrad, of the academic year 2019-2021), “Antidoping in sports” (BK2201; 8th semester, of the academic year 2019-2020), and “Specific Modules of Microbial Ecology” (BX0902; 6th semester undergrad year 2020-2023) at the department of Biochemistry and Biotechnology of UTh, Greece. Teaching at the UTh MSc programmes: Advanced Experimental and Computational Biosciences (module: basics in Bash and R, microbial genomics), Bioentrepreneurship, Biotechnology Nutrition and the Environment, Host-Microbe interactions HosMic (interdepartmental, English-taught; coordinator of module “Bioinformatics for Microbiomes”).

Academic reviewing/editing activity:

- **Reviewer in scientific peer-reviewed journals:** Applied Environmental Soil Science, BIOMED Research International, Critical Reviews in Biotechnology, **Ecology Letters**, **Environmental Microbiology**, Environmental Science and Pollution Research, FEMS Microbiology Ecology, Frontiers in Microbiology, Frontiers in Plant Science, International Journal of Microbiology, Journal of Applied Microbiology, **Journal of Environmental Chemical Engineering**, **Journal of Hazardous Materials**, Letters in Applied Microbiology, Pedobiologia, PeerJ, Research in Microbiology, Science of the Total Environment, Scientific Reports (NPG), **Soil Biology and Biochemistry**, The Scientific World Journal, Waste Management & Research, **Water Research**.
- **Editor in scientific peer-reviewed journals:** Associate Editor in **Frontiers In Microbiology**, topic of **Systems Microbiology** since March 2022.
- **Grants:** **Australian Research Council (ARC)** National Competitive Grants Program (NCGP) assessor since Oct. 2018. **Natural Environment Research Council (UK)** reviewer since Nov. 2018,

Australian Government, Department of Agriculture, Fisheries and Forestry (DAFF), Future Drought Fund – Extension and Adoption of Drought Resilience Farming Practices Grants Program, Australia (remuneration provided for this service) since 2022.

Publication list

[BC] Scholarly book chapters

1. Voolaid V, Donner E, **Vasileiadis S**, Berendonk T (2017). Bacterial diversity and antibiotic resistance genes in wastewater treatment plant influents and effluents. In Antimicrobial resistance in the wastewater treatment process. Keen, P. L. and Fugère, R. eds. (Hoboken, New Jersey, USA: Wiley Blackwell), pp 157-178.
2. **Vasileiadis S**, Puglisi E, Cocconcelli PS, Trevisan M (2013). Screening phylogenetic and functional marker genes in soil microbial ecology. In Omics in soil science. Nannipieri, P, Pietramellara G and Renella G. eds. (Norfolk, UK: Caister Academic Press), pp 45-61.

[PP] Preprints

1. Sim J, Drigo B, Doolette C, **Vasileiadis S**, Karpouzas D, Lombi E (2022). Impact of twenty pesticides on soil carbon microbial functions and community composition. SSRN, <http://dx.doi.org/10.2139/ssrn.4124958>
2. **Vasileiadis S**, Perruchon C, Scheer B, Adrian L, Steinbach N, Trevisan M, Plaza-Bolanos P, Aguera A, Chatzinotas A, Karpouzas DG (2020). Nutritional inter-dependencies and a carbazole-dioxygenase are key elements of a bacterial consortium relying on a Sphingomonas for the degradation of the fungicide thiabendazol. bioRxiv, 2020.2003.2030.015693. (history: submitted and reviewed for the Microbiome journal and rejected with resubmission ability – one extra brief experiment requested plus restructuring of the text – its currently under revision)

Vision, mentors and competences.

Ever since my master's degree I became very familiar with, and was **fascinated by environmental microorganisms for their central role in ecosystem services**. The immense microbial diversity and its functional redundancy, is housing microbial processes responsible for the mineralization and sequestration of nutrients, the manipulation of plant and animal hormones and hormonal balances, thus contributing to their development, and also the control of microbial plant and animal pathogens. Such processes secure our survival and proliferation through several pathways found in natural and built environments. Even more fascinating is the fact that **current technologies** (e.g. omics) enable us **improve our understanding** of these processes and manipulate them to our wellbeing and benefit. In this context, **I sought to study: the dynamic nature of environmental microbial communities** for understanding how interactions have been shaping the presence and activity of these tiny bioreactors throughout the billion years of the planets evolution; **the vastness of the microbial metagenome** for exploring natural novelty related to xenobiotic degradation; **the effects of antibiotic evolutionary/selective pressure** by excessive doses in natural and built environments on the microbial resistance built in response (that may deprive us from recent antibiotic associated advancements like e.g. infection-free operations, which support our long current life-expectancy). All these axes of **my research depended on tools that define the field of molecular microbial ecology and genomics** supporting my vision as outlined here. **I provide a brief description of study tools I mastered, and mentoring I have received and provided ever since my first contact with research, and which have shaped my associated views.**

Throughout my research career and previous training, I have systematically and progressively been developing my expertise and reputation in the use of molecular biology and omics approaches for microbial ecology. I have gained extensive experience with the use of several laboratory methods, including: standard microbiological culture methods; normal and high throughput enzyme activity analysis approaches; optical and fluorescence microscopy methods; and molecular biology methods from nucleic acids extraction to cloning, PCR-based methods and proteomics. Since the late years of my PhD studies I have been focusing on the culture independent microbial ecology approaches, developing high throughput and cost-effective microbiome analysis methods like the Illumina-based microbiome screening via sequencing of PCR amplified microbial phylogenetic marker fragments. The microbiome analysis has also stimulated my training on necessary for the output analysis bioinformatics and biostatistics tools. In the end and after my PhD studies I was initiated in the world of microbial genomics and transcriptomics, while during my postdoc period I was fascinated and dipped deeper in shotgun meta-genomics/transcriptomics/proteomics/bolomics data analysis in systems biology approaches. Thus far, I have been lucky enough to produce and/or analyze data with representative methodologies of all three sequencing generations (analyzed the 1st gen. Sanger data, the 2nd gen. Illumina, Pyrosequencing and Ion Torrent sequencing data, and the 3rd gen. Nanopore and PacBio sequencing data, I have generated Nanopore sequencing data). All the aforementioned sequence-analysis associated tasks have further expanded and deepened my bioinformatics repertoire, my statistics background, my programming skills (strong knowledge of R and Bash programming and basic knowledge of Perl, Python, Java and c++) and my microbial biochemical and ecological understanding and knowledge.

I had several mentors in different fields of environmental sciences who were and still are considered highly influential global experts in their field. I began my trip in microbial ecology during my MSc thesis carried out in the laboratory of Professor Jos Raaijmakers (current head of the department of the Microbial Ecology at NIOO-KNAW - Netherlands) at the Plant

Pathology department of Wageningen UR where I familiarized with culture-based microbiology approaches, enzymatic assays, microscopy and polymerase chain reaction methods. During my MSc internship, I worked as a Research Assistant with Professor Johan Leveau (currently Professor at UC Davis, CA, USA) where I developed skills in single cell genomics with fluorescent in situ hybridization (FISH), fluorescence microscopy and flow cytometry. In my PhD I familiarized with environmental analytical chemistry under the supervision of Professor Marco Trevisan while in my secondment in the Netherlands Institute of Ecology (NIOO-KNAW) under the supervision of Prof. George A. Kowalchuk (currently Professor at the university of Utrecht), I have familiarized with high throughput sequencing approaches in microbial ecology. Since then, I have set-up methods facilitating fast, cost effective and detailed screening of microbial diversity in multiple environments using high throughput sequencing of microbial phylogenetic and functional marker genes. Since my first PostDoc, Professor Dimitrios G Karpouzas of the Biochemistry and Biotechnology Department of the University of Thessaly (UTh, Larisa, Greece), well reputed in the field of microbial pesticides degradation and environmental enzyme mining, gave me the opportunity to use the skills I developed and carry out bioinformatics analyses on shotgun (meta)genomics/transcriptomics data. This was the beginning of a fruitful collaboration which generated strong ties between me and UTh. During my appointment at FII (formerly CERAR) in Adelaide, UniSA, I collaborated closely with Associate Professor Erica Donner and Professor Enzo Lombi, global experts in state-of-the-art techniques for environmental elemental chemistry (e.g. synchrotron-based X-ray Absorption Spectroscopy). I have incorporated these methods in my own research and was able to gain deeper understanding about selective pressures operating on microbial communities in a range of target environmental matrices (e.g. soil, water, wastewater).

Besides developing my analytical and research skills, I have also devoted a significant amount of time mentoring young researchers via co-supervision and teaching of courses and workshops. I have co-supervised together with the professors in the departments I have performed my post-doctoral research several master and PhD students as my supervisors will happily verify (professor Marco Trevisan – marco.trevisan@unicatt.it -, associate professor Erica Donner – erica.donner@unisa.edu.au -, and professor Dimitrios G Karpouzas – dkarpouzas@uth.gr). I have also taught several workshops on microbial genomics and diversity analysis next to complete courses including laboratories – see relevant CV section.

Despite my lab roaming adventures throughout my career, I have always appreciated all the mentoring I received and kept collaborating with past groups as its apparent through my publication track record and contracted consultancies (e.g. recent publications with Professors Trevisan M, Kowalchuk GA, Donner E, Lombi E and collaborative contracts with Advanced Analytical Technologies, and the UniSA FII). Most importantly, the aforementioned ties with the group of Professor Dimitrios G Karpouzas at UTh resulted in great research, as reflected in the numerous project outputs of my publication list. The most inspiring one being that of a systems biology approach (an MSCA IF fellowship) for the characterization of the rapid degradation (3-4 days) of a recalcitrant compound (thiabendazole; half-life in soil 1-2 years) by a microbial consortium (see preprints; submitted in Microbiome). There we had the opportunity to expand our omics toolbox to more high-end methods like non-target proteomics and metabolomics, while I had the opportunity to expand my computational abilities to fields like chemoinformatics (build-up MS databases of putative metabolites) and biophysics (analysis of protein-ligand interactions). The momentum of our research is reflected on our ability to attract prestigious funding (e.g. we have managed to succeed in the national ELIDEK funding scheme call and I am currently a group member in several EU funded projects).
